

IBM Watson Internet of Things (IBM Watson IoT™) IBM® Engineering Requirements Management DOORS® Next Training Course

IBM Watson IoT™ DOORS® Next Training Course

This 2-day course aims to equip students with a fundamental knowledge of IBM® DOORS® Next and its constituent processes, in order to enhance Requirement Management procedures within Software and Systems Development teams.

The course combines real world scenarios with theory, presented by an IBM® certified Technical Specialist, to provide students with a unique learning experience which will allow them to use the tool with more confidence and efficiency.

The course examines why effective Requirements Management is so important and looks at the various stages of the process. We then go on to map IBM® DOORS® functionality onto this process which will enable students to utilise the tool in order to have greater control of requirements.

The course teaches how to implement a formal and unified process whilst reducing time and effort spent on requirements. We also examine how to work smarter with configuration and work management.

What you will learn

On successfully completing the course, students will be able to:

- Confidently and effectively use the IBM® DOORS® Next tool
- Understand the different terminology within the tool
- Navigate around the IBM® DOORS® Next Dashboard
- Work with requirements in a collaborative context
- Create traceable relationships between links
- Import and Export Data from the tool
- Identify sound Configuration protocols

Tasks

The course can be customised to organisational needs and can be delivered either on customer site or at an approved venue. We also offer a condensed 1-day course. Whilst no prior knowledge of IBM® DOORS® Next is required to book onto this course, we do ask that customers have a basic understanding of systems engineering principles.

About SyntheSys

SyntheSys provides defence systems, training, systems and software engineering and technical management services over a spectrum of different industry sectors. Along with distinct support and consultancy services, our innovative product range makes us first choice provider for both large and small organisations. Established in 1988, the company focus is on fusing technical expertise with intuitive software applications to solve common industry challenges.
