

Variable Message Format (VMF) Table of Contents

Chapter 1 – An Introduction to VMF

- A Short History of VMF
 - Generic Variable Format Messages
 - VMF and JVMF
 - What is VMF?
 - Transmission Media
- VMF Overview
 - VMF System Requirements
 - High Volume of Data to be Exchanged
 - Non-Mission Traffic
 - Situational Awareness (SA)
 - Link Management
 - Position Updates
 - Free Text
 - Voice
 - Very High Reliability
 - High Speed of Service (SOS)
 - Forward Error Correction (FEC)
 - Rapid Automatic Recovery in the Event of Failure
 - Proven Products
 - VMF Documentation
 - Who is going to use VMF?
 - VMF Networks

Chapter 2 - Open Systems Interconnection (OSI) 7

- Layer Model**
- VMF SYSTEMS AND INTERNATIONAL COMMERCIAL STANDARDS
 - OSI 7 Layer Model
- DATA FRAME COMPILATION
 - Ethernet Principles
 - Summary

Chapter 3 - CNR Performance Definitions

- CNR Performance DEFINITIONS
 - Delay
 - Equipment Lag Time (ELAG)
 - Data Exchange Rate
 - Data Rate
 - Throughput
 - Effective Throughput
 - Speed of Service (SOS)
 - Reliability
- Meaningful System Comparisons

Chapter 4 – MIL-STD-188-220 Frames & Related Subjects

- FRAMES
- Communication Modes
 - Synchronous Mode
 - Asynchronous Mode
 - Packet Mode
- Types of Data Link Layer Frames
 - Un-Numbered (U) Frames
 - Information (I) Frames
 - Supervisory (S) Frames
- Flags
- Data Link Addressing
 - Address Resolution Protocol and Neighbour Discovery
- Control Field
- Poll/Final (P/F) Bit
- Type of Service 2 Sequence Number
- Precedence
- Information Field
- Frame Check Sequence

Chapter 5 – Types of Service

- TYPES OF SERVICE
 - Connection Orientated or Connectionless TOS
 - Data Link Acknowledgements
- TYPE 1 TOS
- TYPE 2 TOS
 - Reject - (REJ)
 - Selective Reject (SREJ)
 - Type 2 Operational Modes
 - ABM
 - ADM
- TYPE 3 TOS
 - Immediate Retransmission
- TYPE 4 TOS
 - Window Method
 - Frame Duplicate Detection
 - Station Classes
 - TOS Selection
 - TOS Summary
 - Quiet Mode

Chapter 6 – NETWORK ACCESS CONTROL

- NETWORK ACCESS CONTROL
 - Types of NAD

NAD Overview
 Random NAD (R-NAD)
 Hybrid NAD (H-NAD)
 Radio Embedded NAD (RE-NAD)
 Prioritised NAD (P-NAD)
 Deterministic Adaptable Priority NAD (DAP-NAD)
 Bump Slot
 Data and Voice NAD (DAV-NAD)
 Frequency of Access Ranking (FOAR)

Chapter 7 – EXCHANGE NETWORK PARAMETERS

EXCHANGE NETWORK PARAMETERS

Exchange Network Parameters (XNP)
 Network Control
 XNP Messages
 Join Request
 Join Accept
 Join Reject
 Hello Message
 Goodbye Message
 Parameter Update Request Message
 Parameter Update Message
 Status Notification
 NCS Handover Request
 NCS Accept/Reject
 NCS Election
 Participant Information Request
 Participant Information
 CANTPRO Indication
 Typical Join Sequence
 Type 1, Type 3 or Type 4 TOS
 Type 2 TOS - SABME
 Procedures When Leaving a Network

Chapter 8 – MESSAGE & HEADER SYNTAX

INTRODUCTION

VMF Message Cases
 Header Cases
 VMF Message and Header Conditions
 Fields, Groups and Recurrence
 Field Presence Indicators (FPI)
 Field Recurrence Indicators (FRI)
 Group Presence Indicators (GPI)
 Group Recurrence Indicator (GRI)
 Nested Groups, Fields and Repeat Codes
 Syntax Summary

Chapter 9 – APPLICATION HEADER (MIL-STD-2045-47001)

MIL-STD-2045-47001 APPLICATION HEADER

Application Header Fields

Version
 Data Compression Type
 Originator, Recipient, and Information Addressee
 Unit Name
 Header Size
 Message Concatenation/Message Handling Groups
 UMF
 Binary File
 Redistributed Message
 US Message Text Format (MTF) Messages
 DOI 103 Messages
 XML-MTF
 XML-VMF
 Message Standard Version
 Functional Area Designator (FAD)
 Message Number
 Message Subtype
 File Name
 Message Size
 Operational Indicator
 Re-transmit Indicator
 Message Precedence
 Security Classification
 Control and Release Marking
 Originator Date-Time Group (DTG)
 DTG Extension
 Time Perishability DTG
 Machine Acknowledge Request Indicator
 Operator Acknowledge (OPRACK) Request Indicator
 Operator Reply Request Indicator
 Message Acknowledgement DTG
 Receipt/Compliance (R/C)
 Cannot Comply (CANTCO) Reason
 Cannot Process (CANTPRO) Reason
 Reply Amplification
 Reference Message Data Group
 Message Security Group
 Segmentation/Reassembly (S/R)

Chapter 10 – VMF FUNCTIONAL AREAS & MESSAGES

FUNCTIONAL AREAS

FA Description
 FAD 00 - Network Control Functional Area
 FAD 01 - General Information Exchange Functional Area
 FAD 02 - Fire Support Operations Functional Area

FAD 03 - Air Operations Functional Area
FAD 04 - Intelligence Operations Functional Area
FAD 05 - Land Combat Operations Functional Area
FAD 06 - Maritime Operations Functional Area
FAD 07 - Combat Service Support Functional Area
FAD 08 - Special Operations Functional Area
FAD 09 - Joint Task Force (JTF) Operations Control Functional Area
FAD 10 - Air Defence/Air Space Control Functional Area
FA Summary

VMF K-SERIES MESSAGES

Message Threads
How to Use VMF Messages
Entity Referencing Schemes in VMF
Unit Reference Number (URN)
URN Allocation
Unit Name
URN Look-Up Table
URN Look-Up Table - General Description
EISN
Resetting the EISN
EIRN

Chapter 11 – Radios & Data Modems

VMF CAPABLE RADIOS AND MODEMS

Compliant Radio Types
Voice Priority
SINGGARS ICOM CNR
SINGGARS SIP CNR
SINGGARS ASIP/Advanced Data Radio (ADR) CNR
UHF - Single Frequency and HAVEQUICK II
MIL-STD-188-220 Data Modems
Internet Controller (INC)
Tactical Communication Interface Module (TCIM)
The Improved Data Modem (IDM)
Tadiran Tacter Terminals
Integrated Systems
Displays
Summary

Chapter 12 – Inter/Intranet, IP, TCP & UDP

INTRODUCTION

Intranet Protocol (ip)/Relay
Internet Protocol (IP)

Transmission Control Protocol (TCP)
TCP/IP and User Data Protocol (UDP)/IP
N-Layer Pass-Through
Subnet Communication and Intranet Relay
Subnet to Subnet Communication
Exchange of Data Between Networks
Tactical Internet (TI)
VMF Nets and the TI
Sources of TI Data
Accessing a VMF TI

Chapter 13 – Data Forwarding - VMF/Link 16

Data Forwarding Definition – MIL-STD-6020
Message Translation (MT) – MIL-STD-6020
Data Element Conversion (DEC) – MIL-STD-6020
Data Element Equivalence (DEQ) – MIL-STD-6020
Data Element Translation (DET) – MIL-STD-6020
Gateways
LINK 16/VMF DATA FORWARDING ISSUES
Bandwidth
Periodicity
Track Quality (TQ)
Track Management
Network Access
C2 and NonC2 Units
Data Forwarder Types and Locations
Gateway Options
General Procedures for Activating VMF/Link 16
Data Forwarding

Chapter 14 – Network Management

Network Management
TDL Architecture Planning
Network Design
Tactical Planning
Operational Network (OPNET) Management
Data Recording and Analysis
Data Filtering
Summary
VMF Testing
Test Tools
VTT & PTT
DACAS VMF Messaging Tool (DVMT)
UK Test Tool

Chapter 15 – Interoperability Issues

INTEROPERABILITY ISSUES

Levels of Interoperability
Technical IO
MIL-STD-188-220 Interoperability Issues

- Data Modem Incompatibility
- MIL-STD-2045-47001 Header
- Interoperability Issues
- MIL-STD-6017 and VMF TIDP
- Interoperability Issues
- Operational IO
 - Functional IO
 - Operator IO
- Inter-Link Interoperability
- Interoperability Improvements
 - CIR
 - Reduction in MIL-STD Options
 - System Implementation Databases
 - VMF Interoperability Summary

Chapter 16 – XML-VMF

XML-VMF

- Where to Use XML-VMF
- XML-VMF Schemas
- XML-VMF Specification in MIL-STD-6017
- XML for Data Forwarding
- XML-VMF Summary

Chapter 17 – VMF Through-Life Interoperability

Planning (TULIP)

- Introduction to Through-Life Interoperability
- Planning (TULIP)
 - TULIP Documents
 - VMF User Guide
 - VMF Single Link Interface Requirement Specification
 - VMF System Bearer Definition Document
 - VMF Platform Implementation Difference Document
 - VMF Platform SLIRS (P-SLIRS)
 - VMF System Data Link Platform Implementation Database
 - Concept of Employment (CONEMP)
 - Concept of Use (CONUSE)
 - Concept of Operations (CONOPS)
 - System Management Operating Procedures (SMOPS)
 - Summary

Annex A – List of Acronyms

Annex B – VMF Message Catalogue

VMF MESSAGE LISTING - MIL-STD-6017A VMF – 2006
